I have reviewed the results for the North Bluff Road Loam and approve it for use as it will be mixed with other material and used as top soil for planting.

Subject: Sample Results UP

Hi Mark,

We have received full results from the MIS sampling of Area RS-2C and most of 2B. 2C shows dioxins at 7.57, above the action level (1.4), all other COCs are below action levels. We are waiting on dioxin results for 2B, all other COCs are below action levels. An updated results table is attached.

We also received MIS results of the North Bluff Road Loam material, the fill that was stockpiled halfway up the road from Upper Campus. Results were similar, and slightly lower, than the other upper campus material. So we request that EPA agree to its use as fill in the removal action. Results are attached and the new data for this fill material are highlighted.

Thanks,
Tasya
